Art Unit: 3753

The following is an examiner's statement of reasons for allowance: the prior fails to teach routing actuator branch passages from the option valve to ports closed with the end cover.

Obertriffter et al. shows the valve block as claimed except for a check valve (claim 1, lines 12-13) and the actuator port of the option valve closed with an end cover. Tohji shows the check valve, but does not appear to show an end cover blocking an actuator line. In both references, the actuator lines are connected laterally. It is not seen as obvious to route only the end valve actuator lines toward the cover, as that would require a different design for the last (option) valve block. The lateral design permits all Obertriffter blocks 19 to be identical.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
